

Nodalida CG-workshop 2023

21st May 2023

Dear colleagues and fellow researchers

We plan a discussion at the end of our workshop and since it's at the end of the day where people may be tired, we would like to encourage you to think about how to make this part of the workshop more fruitful beforehand.

1 Topics to think of:

1. Rule-based approaches vs. neural nets
 - The future of CG/rule-based NLP
 - Rule-based NLP in the time of ChatGPT
2. The dimensions of the language technology landscape

Languages: the haves and have-nots

Needs: From keyboards via proofing tools to speech technology

Philosophy: We need to identify what task/language combinations require rule-based approaches

3. Working together
 - How to maintain the CG infrastructure
 - Applying for networking money?
 - Summer schools / education courses

2 Questions:

1. Is there something we do that ChatGPT like tools cannot do?
2. What would the future of very low resource languages be without rule-based technologies?
3. How can our work be more visible in an international context?

4. How can we work together for more visibility? Apply for a common project/grant?
